# Autour des lignes trigonométriques étudiées au collège

Mathématiques

## Dans un triangle ABC rectangle en B

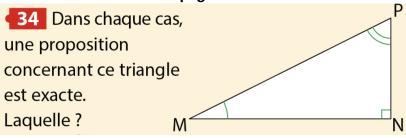

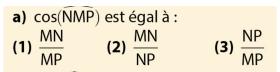

$$\cos\left(\widehat{BAC}\right) = \frac{AB}{AC}$$

$$\sin\left(\widehat{\mathit{BAC}}\right) = \frac{\mathit{BC}}{\mathit{AC}}$$

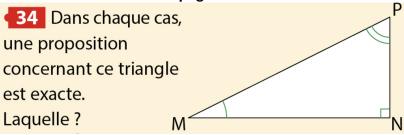

$$\tan\left(\widehat{BAC}\right) = \frac{BC}{AB}$$

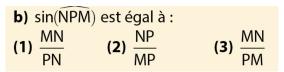

#### 34 page 148

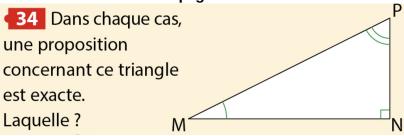

### 34 page 148

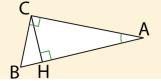

c)  $tan(\widehat{NMP})$  est égal à : (1)  $\frac{MN}{MP}$  (2)  $\frac{PN}{MN}$  (3)  $\frac{NP}{PM}$ 

#### 36 page 148

- 35 Écrire dans deux triangles rectangles diffé-
- rents l'expression de :
- **a)** cos(BAC) **b)** sin(BAC)

c) tan(BAC)

Calculer les longueurs des segments en rouge.
